By Ilaria Teberneac

I implemented BucketSorts with Lists as my buckets.

As we can see in the graph below, BucketSort is much more efficient than QuickSort, as it takes less time to sort the same number of units. The difference is especially evident at the end of the list, where, for 9,500 units, QuickSort takes 0.0186 seconds, while BucketSort takes only 0.0023 seconds, making it significantly more efficient.
